

ERHARDT WSW – an elegant solution

A variety of mast brackets and grips are available for the ERHARDT WSW. The mast can also be secured flexibly to the side awnings so that it can be removed completely in winter.

Existing structural elements, such as pillars, walls, or robust fence components, can also be used for the ERHARDT WSW.

ERHARDT WSW

FLEXIBLE, PRACTICAL AND VERSATILE PRIVACY

The ERHARDT WSW is a side screen awning with a free choice of height (up to max. fabric height of 1.77 m). That makes it an ideal solution for when the sun is low, the wind is uncomfortable or curious glances are unwelcome. The side screen awning offers ideal privacy protection on balconies, patios and terraces. The simplest of operation – the awning fabric can be extended or retracted quickly and easily with a single motion.

The side awning can be extended to a maximum length of 4 m, but it is also an elegant solution in tight spaces (e.g. on a balcony). Its tested and proven spring tensioning makes the ERHARDT WSW suitable for use in stronger winds as well. The side screen awning can be mounted nearly anywhere because a single wall can serve as the attachment point. The brackets which are available also require little space and are very unobtrusive and flexible in use.
